COMMISSIONING

Data centre / central reading system

1. System support (communication)

If included in the quotation and ordered when the order is placed, this comprises: attendance at 1 – 2 coordination meetings. Attendance at a site inspection, together with the electrical, heating and, where applicable, sanitary installers, based on a metering point allocation list with wiring diagram (usually prepared by the electrical planner).

2. Data centre preparation

The electrician is responsible for ensuring that the data centre is installed in accordance with the applicable requirements and guidelines. Note: GWF AG is not responsible for the inspection and acceptance of the installation.
If it is a communication box, it must be connected according to the diagram in the cover.

3. Request for commissioning

Once the data centre has been installed, the customer or installer requests commissioning from **GWF in writing using the official request form** three to four weeks in advance (see page 2).

4. Commissioning

GWF will ensure that the work is carried out as quickly as possible. Personnel familiar with the system must be provided on site for commissioning; the system must be ready for operation and the data centre must be installed in accordance with the installation instructions and electrically wired. Additional work and operational waiting times of our customer service staff will be invoiced separately according to the actual time spent. Commissioning comprises:

1. Functional test of the data centre including checking of the communication (4G, Ethernet, MBus, etc.)
2. Parameterisation of the data centre (report, time synchronisation, etc.)
3. Recording and logging of the data centre found on site using the commissioning report

5. Rules for short-notice postponements or cancellations

In the event of short-notice postponements or cancellations (less than 48 hours before the agreed appointment), compensation costs are to be expected. If the planning time that has become available at short notice cannot be used otherwise, GWF AG reserves the right to invoice 80 % of the service costs included in the order in proportion to the downtime. The same applies if the system registered for commissioning is not ready for operation (according to the information in the commissioning information sheet) and the planned commissioning has to be cancelled as a result. In this case, services already provided for the property concerned will be invoiced on the basis of the applicable time and material rates and not at the agreed conditions.

6. Warranty

Warranty services are provided in accordance with the General Terms and Conditions (GTC)

DATA CENTRE

Request for commissioning

Dear Sir or Madam

To ensure that the GWF data centre installed in the property mentioned can be commissioned on schedule and cost-effectively, please fill in the request for commissioning completely, sign it and send it to service@gwf.ch.
